Terms of Acceptance

In order to provide for the most effective healing environment, most effective application of chiropractic procedures, and the strongest possible doctor-patient relationship, it is our wish to provide each patient with a set of parameters and declarations that will facilitate the goal of optimum health through chiropractic.

To that end, we ask that you acknowledge the following point regarding chiropractic care and the services that are offered through this clinic:

- A. Chiropractic is a very specific science, authorized by law to address spinal health concerns and needs. Chiropractic is a separate and distinct science, art and practice. It is not the practice of medicine.
- B. Chiropractic seeks to maximize the inherent healing power of the human body by restoring normal nerve functions through the adjustment of spinal subluxation(s). Subluxations are deviations from normal spinal structures and configurations that interfere with normal nerve processes.
- C. The chiropractic adjustment process, as defined in the law of this jurisdiction, involves the application of a specific directional thrust to a region or regions of the spine with the specific intent of re-positioning misaligned spinal segments. This is a safe, effective procedure applied over one million times each day by doctors of chiropractic in the United States
- D. A thorough chiropractic examination and evaluation is part of the standard chiropractic procedure. The goal of this process is to identify any spinal health problems and chiropractic needs. If during this process, any condition or question outside the scope of chiropractic is identified, you will receive a prompt referral to an appropriate provider or specialist, according to the initial indications of the need.
- E. Chiropractic does not seek to replace or compete with your medical, dental or other type(s) of health professionals. They retain responsibility for care and management of medical conditions. We do not offer advice regarding treatment prescribed
- F. Your compliance with care plans, home and self-care, etc., is essential to maximum healing and optimal health though chiropractic
- G. We invite you to speak frankly to the doctor on any matter related to your care at this facility, its nature, duration, or cost, in what we work to maintain as a supporting, open environment.

By my signature below, I have read and fully understand the above statements.

(Signature of Parent/ Guardian)	(DATE)
I consent to receive communication from PC via email, care. \square Yes \square No If I should withdr	postal mail, text and telephone messaging in connection aw my consent, I will notify the office in writing.

I understand that I have certain rights of privacy regarding my protected health information, under the Health Insurance Portability & Accountability Act of 1996 (HIPAA). I understand that this information can and will be used to:

- Conduct, plan and direct my treatment and follow-up among the multiple healthcare providers who may be involved in that treatment directly and indirectly.
- Obtain payment from third-party payers.
- 3. Conduct normal healthcare operations, such as quality assessments and physicians certifications.

I acknowledge that I may request your NOTICE OF PRIVACY PRATICES containing a more complete description of the uses and disclosures of my health information. I also understand that I may request, in writing, that you restrict how my private information is used to disclosed to carry out treatment, payment, or healthcare operation. I also understand you are not required to agree to my requested restrictions, but if you agree, then you are bound to abide by such restrictions.

Informed Consent to Care

You are the decision maker for your health care. Part of our role is to provide you with information to assist you in making informed choices. This process is often referred to as "informed consent" and involves your understanding and agreement regarding the care we recommend, the benefits and risks associated with the care, alternatives, and the potential effect on your health if you choose not to receive the care. We may conduct some diagnostic or examination procedures if indicated. Any examinations or tests conducted will be carefully performed but may be uncomfortable.

Chiropractic care centrally involves what is known as a chiropractic adjustment. There may be additional supportive procedures or recommendations as well. When providing an adjustment, we use our hands or an instrument to reposition anatomical structures, such as vertebrae. Potential benefits of an adjustment include restoring normal joint motion, reducing swelling and inflammation in a joint, reducing pain in the joint, and improving neurological functioning and overall well-being.

It is important that you understand, as with all health care approaches, results are not guaranteed, and there is no promise to cure. As with all types of health care interventions, there are some risks to care, including, but not limited to: muscle spasms, aggravating and/or temporary increase in symptoms, lack of improvement of symptoms, fractures (broken bones), disc injuries, strokes, dislocations, strains, and sprains.

With respect to strokes, there is a rare but serious condition known as an "arterial dissection" that typically is caused by a tear in the inner layer of the artery that may cause the development of a thrombus (clot) with the potential to lead to a stroke. The best available scientific evidence supports the understanding that chiropractic adjustment does not cause a dissection in a normal, healthy artery. Disease processes, genetic disorders, medications, and vessel abnormalities may cause an artery to be more susceptible to dissection. Strokes caused by arterial dissections have been associated with over 72 everyday activities such as sneezing, driving, and playing tennis.

Arterial dissections occur in 3-4 of every 100,000 people whether they are receiving health care or not. Patients who experience this condition often, but not always, present to their medical doctor or chiropractor with neck pain and headache. Unfortunately a percentage of these patients will experience a stroke. The reported association between chiropractic visits and stroke is exceedingly rare and is estimated to be related in one in one million to one in two million cervical adjustments. For comparison, the incidence of hospital admission attributed to aspirin use from major GI events of the entire (upper and lower) GI tract was 1219 events/per one million persons/year and risk of death has been estimated as 104 per one million users. It is also important that you understand there are treatment options available for your condition other than chiropractic procedures. Likely, you have tried many of these approaches already. These options may include, but are not limited to: self-administered care, over-the-counter pain relievers, physical measures and rest, medical care with prescription drugs, physical therapy, bracing, injections, and surgery. Lastly, you have the right to a second opinion and to secure other opinions about your circumstances and health care as you see fit. I have read, or have had read to me, the above consent. I appreciate that it is not possible to consider every possible complication to care. I have also had an opportunity to ask questions about its content, and by signing below. I agree with the current or future recommendation to receive chiropractic care as is deemed appropriate for my circumstance. I intend this consent to cover the entire course of care from all providers in this office for my present condition and for any future condition(s) for which I seek chiropractic care from this office.
